

# Project Management 1

## Github website shell

### Task

Begin with the basic portfolio scaffold from Week 02 slides.

Add a .css file to contain all CSS configurations.

Set up CSS classes for each of the 4 sections (about, skills, projects, contact)

Alter the CSS in some noticeable way (color and font are the most common, but others are allowed).

Commit the HTML and CSS content to the repository you created in Foundation 2.

Test the website when the changes propagate fully.

### Deliverable

Submit your github.io link to Blackboard
